

Issues In The Meaning And Definition of Logic

Post by “Martin” of August 27, 2021 at 3:12 AM

Except for the "No", I agree with Godfrey's comment #61.

In my comment #43, I used "map" in a loose meaning in the sense of a model just because I was referring to a quote using the word "map" and did not notice that my statement becomes wrong when applying a proper definition of the word "map". A model could be anything, e.g. a set of markers.

Regarding syllogisms, I meant the internalization such that we do not need to write down a truth table every time we consciously apply logic. My personal observation at the end of #43 is an indication that we cannot subconsciously perform logic in a reliable way while we are not fully conscious. Logic is apparently performed in a part of the brain which actually turns off when we are not fully awake.
