Aye, there's the rub

Yes indeed that is the rub of this whole discussion.

In the absence of clear authority from Epicurus as to how he was doing it, the whole endeavor is little more than speculation. Even attempting to use the examples that seem reliable (for example the reference to joy and delight as kinetic) can in my mind be equally something entirely volitional or "automatic" and without analysis.

But the approach you are taking in attempting to be specific is almost certainly the way forward as that will provide good examples of which we can debate the merits. From there we can work on more precision and the precision will (I am confident) point out the problems with the current mainstream analysis.
