

Article: Chimpanzees observed using human-like warfare tactic

Post by “Kalosyni” of November 2, 2023 at 7:09 PM

This an interesting read (link to full article follows):

Quote

Studying chimpanzee behavior may offer insight into our own species.

"We can better understand where we come from and what makes us human. We can better understand which kind of behaviors and adaptations were present in the last common ancestor between humans and chimpanzees, and have a better idea of the sociality and behavior of ancient hominin species," Lemoine said, referring to extinct species on the human lineage.

"It also teaches us what we have in common with our closest living relatives, how similar we are with wild animals, and that we only differ from our cousins in degree and not in nature," Lemoine added.
