

# **A Food Analogy That May Be Useful In Thinking About Stimulative vs Non-Stimulative Pleasures**

**Post by “Joshua” of March 27, 2024 at 9:17 PM**

The other question is one of risk; if I take risk x, it may provide both mild immediate pleasure and mild immediate pain, but the rest of the calculus is marked by an unavoidable ambiguity. The risk could either result in pleasureable success y, or painful failure z. Unlike a hangover, neither eventuality is easily predictable.
