

# Discussion of New Article - In An AI World, The Epicurean View of Knowledge Is More Important Than Ever

Post by "Don" of May 16, 2026 at 12:19 PM

My possibly idiosyncratic position on Epicurean prolepsis, filtered through possibly a modern lens, is that prolepsis is the faculty that allows us to make sense of the ever-flowing flood of sense perceptions coming into our physical and mental senses. Prolepsis picks up or sorts out patterns that correspond to real world phenomena. The senses register colors, shapes, etc to the eye in a kaleidoscopic flood. Prolepsis picks out patterns and reoccurring patterns that can be worked on by reason. The flood of colors random shapes etc come first; this shape holds together, moves together, has some permanence over time - this seems significant. Then reason steps in and names it a *dog* (or *canem* or *cù* or whatever your culture names that shape).
