

Lucretius On The Development of Language

Post by “Eikadistes” of October 23, 2019 at 8:33 AM

This reminds me of the Romulus and Remus Hypothesis which suggests that recursive language was created by two or more children who carried a genetic mutation that gave them the opportunity to develop their prefrontal cortex about seventy-thousand years ago. They note that complex structures, symbolic paintings, ceremonial artifacts, and the beginning of religion only appear after this period. They conclude that the distinguishing feature of a modern human is an active imagination. [<https://www.news-medical.net/news/20190805/...magination.aspx>]
