My intuition about indivisibility is that without it, it might be easier to propose a "god of the gaps"-- a supernatural force whose effects are hiding out in the unmapped territory.

Elayne, I've never heard the phrase "god of the gaps", but that's exactly why I'm interested in this topic. Many of the terms thrown around from modern physics can lead the uninformed layman such as myself to consider such an idea. To address that I'm attempting to get more informed, and from what I gather Stenger's book takes that on pretty directly. We'll see!
