

DeWitt: "It Makes No Difference That Some Pleasures Are Static And Some Are Kinetic"

Post by "Cassius" of January 29, 2018 at 6:18 AM

My first reaction to that is that I would want to dig into the Greek to see how the translators come up with "condensed" as the best translation in the first place. Using the definition you suggest would certainly lead to your conclusion that pleasures are qualitatively different, but it seems to me that your definition presumes that result (cannot be properly added to themselves because they are qualitatively different), and so I would still have to question why that result should be presumed. If I could go back in time I would take up the study of ancient Greek instead of just a little Latin.
