

# Epicurus' Birthday Calculations

Post by “Don” of May 16, 2021 at 7:16 PM

## [Quote from Cassius](#)

Sounds like perhaps for practical purposes the 20th of January each year might serve as a reasonable approximation, if someone were looking for a stable date.

That's not a bad compromise. One could use the new calculations on the calendar link I sent, but that date is going to move around depending on the lunar cycles.
