

Where Is Epicurus In The "School of Athens"?

Is there any reason to think at all that [Laertius](#) was ever out of circulation after it's date of writing in the 200's AD?

We have a couple of recent translations, including a Cambridge version and the Mensch version. I am skimming through the preface material in both but I don't see anything in them to indicate that there would be any issue of gaps or rediscoveries in their transmission.
