

Issues In The Meaning And Definition of Logic

Post by “Godfrey” of August 18, 2021 at 2:41 AM

I hadn't thought of it in this context, but over the years I've derived much pleasure from geometry, trigonometry and basic math. They have been pleasurable in themselves to varying degrees, and also as useful tools to realize the joys of drawings, which often themselves were useful tools in the creation of a variety of objects and spaces.

In dealing with various theories of beauty and proportion, to me beauty and resonance in the resulting products invariably come down to the humanity and the feelings expressed. Without humanity and feelings, any coherent inner logic falls flat.

Furthermore, I can't say that geometry, trig or math ever provided me with any valuable insights; they assisted in refining and communicating other, more interesting and relevant ideas.
