

Episode One Hundred Nineteen - Letter to Herodotus 08 - More On Perception Through The Atoms

Post by "Cassius" of June 22, 2022 at 7:18 AM

[Quote from Martin](#)

Within Epicurean physics, atoms are hard bodies. If they were large and not emitting anything, they would at least be visible as shadows.

Yes that makes sense too, which is along the lines that they ought to be "touchable."

I also think that as raised earlier a very precise discussion of this would need to account for the apparent Epicurean position that "images" (at least some of them) are or can be invisible.

(I know I am addressing only part of Martin's comments here but I don't have comment yet on the rest.)
