

# Testing ChatGPT with Epicurean Philosophy

**Post by "Root304" of March 3, 2023 at 2:16 PM**

I find the Chat GPT to be a useful tool in filling in obvious holes in my own questioning, and even some rudimentary reasoning and giving me a pretty good story to start a search for information with. That story-crafting can save an enormous amount of time. I think of it as a next generation search engine. It also generally reaches the limits of what sorts of information is readily available through online sources, and when I actually get into deeper questions and minutiae, Chat GPT tends to dry up. It's also great to ask it for book titles for further research. Give it a few rounds of Socratic questioning and you will likely find some jumping off points into academic research. It's going to change academia in some big ways that could actually be positive in a more optimistic view. Sure there's a lot of disconcerting elements about it. We live under a regime of information tech "progress", creative destruction and disruption without a lot of social progress happening, so deep concern is a reasonable response.

As for Epicurean studies, communities like this will always be a great place to really explore beyond the readily available knowledge, and actually get to philosophizing ourselves. Especially since the goal is to reconstruct an understanding of the original philosophy.
