

Epicurus On The Issue of The Universe Being Infinite In Space

Post by “Martin” of October 3, 2023 at 6:52 AM

Whereas I am not aware of an outright refutation of MOND, that theory can describe well only the observations for single galaxies. MOND has significant difficulties both with galaxy clusters and over cosmological distances. It is a purely empirical modification of Einstein's theory without an explanatory foundation.

My quick reference for this is in German:

<https://pro-physik.de/zeitschriften/download/12825>

My impression is that MOND is an almost useless ad-hoc model because it is not good enough to explain anything to similar depth as Einstein's theories of relativity do.
