I'm a follower of those scientists like Pavel Kroupa and Eric J. Lerner who argue that the traditional cosmological paradigm of a Big Bang, dark energy and an expanding universe is false and present the thesis that the actual empirical data supports a Milgromian universe (MOND) which is always evolving but not expanding and with no beginning in time.

Peter if you can point to particular articles that you have found valuable on this subject I would definitely like to see them linked in this section of the forum.

There is plenty of content with Pavel Kroupa on youtube and some with Eric Lerner. For us here who are (I presume) laymen as far as cosmology is concerned it's always more pleasing to hear specialists inform us than read papers meant for experts.
