

A Discussion On Anticipations from 2017

Post by "Cassius" of April 14, 2019 at 12:01 AM

Elli's comment on that last summary:

Cassius wrote : Glancing back at the state of the summary of the canon, my current thought is that it is no so important to take a detailed position on how anticipations operate, and the main thing is noting (as I think we do) that preconceptions are an innate faculty for the forming of conceptions. The question of *how* conceptions are formed can be left to another day so long as the general statement doesn't imply that reason is used to form them.

<<the preconceptions are an innate faculty for the forming of conceptions>>.

I do not agree Cassius, with the procedure, because is not started like this ! First are the concepts based on words and then they become pre-concepts.

i.e. The concepts have been formed with the words and the faculty of speech and are based on words and with this way they exist inside the brain as pre-concepts =images, and the brain draws them very quickly and spontaneously when we speak or we see or we feel something around us.

1. example : we watch the Discovery channel and we ask : What is this animal that has a body with white and black stripes and eating grass ? Someone who know what is zebra would answer zebra. Someone who does not know what is zebra would say that is seems to be like a horse. Both they are right, because they see an animal, and this is the main concept of the word animal. But the accurate one is the first who said zebra. Since he learned the word what is the animal zebra, he knows the name of the animal zebra, and has this pre-concept with an image in his brain. And that is because his mother and father read him books with pictures with animals or they went to the zoo to watch the animals and they gave him all the names of the animals For complicated concepts e.g. for "justice" the child learned with experiences based on words with discussions and actions inside his home, after in school, after in the society and so on, but all have been formed with the words and the faculty of speech that is based on senses and calculation pleasure and pain. And all are as pre-concepts/images inside the brain. The brain remembers the most of the experiences and has the capacity to store, to add, to remove, but nothing is not removed totally. There is not a total format in the brain while we are alive because we have been formed the preconcepts-images already.

2. example : The preconcept /image based on the concept of the word "home " ! One has formed a pre-concept inside his the brain based on the experience of a palace, another one of an apartment, another one of detached house, another one of a hut, and the Diogenis the cynic of his pot. But all they think and speak for the same thing-concept based on the word "home", and all they have the pre-concept/image about a shelter to not be cold.

IMO this is the procedure, and if it won't be like this the world and the reality will be chaotic.
