

"Space Weather" - Solar Flares

Post by "Cassius" of May 11, 2024 at 7:04 AM

I think that something like "self-sufficiency in time of crisis" is a good topic for continued discussion as I am very interested in doing some preparation myself. I spend a lot of time in a rural area subject to possibly week-long interruption in power from ice storms and hurricanes, so this is of practical interest.

In this case I have "copied" (rather than moved) the last several posts into a new forum here:

Thread

[Dealing With Electric Grid Disruption](#)

Admin Edit - This thread was split off from [the Solar Flare Discussion Started HERE](#).

[...]

I've been down this trail of thoughts - let me give you my travel notes, as they might simplify your journey through this rabbit hole 😊

Why blackouts can happen anytime, anywhere:

- There is no advance warning: Back in 2006, when the European grid was still in quite good condition, one operator negligence in northern Germany split the entire grid into three segments (an automatic fail-safe procedure), in the
