

# Key Citations - The Universe As Infinite In Space - Many Worlds With Life

**Post by "Cassius" of July 16, 2024 at 12:23 PM**

I need to know exactly what Aristotle said, but I could see Epicurus agreeing that the 'concept of infinity' is a mental construct only, while at the same time holding that the number of atoms actually existing is uncountable and extends without limit or boundary out into space "forever."

I see the javelin example as highly useful - it illustrates that the limit is in US, not in the reality of space or atoms, because "if we could live forever" we could go on throwing the javelin outward, and counting atoms, forever and ever.
