

Nothing Ain't Worth Nothing....

Post by “kochiekoch” of November 6, 2024 at 1:00 PM

[Quote from Cassius](#)

How tightly is "Nothing comes from Nothing" tied to "Atomism?"

"Atomism" seems to postulate that the way the universe works with regularity is that there are eternal irreducible particles which when moving through empty space come together to form bodies, and that this process explains and underlies the regularity of all that we see.

Would a "plenum" (no empty space anywhere) work just as well?

If not, why not?

Nope, the plenum would be a black hole. Infinite density and energy. You can't make much out of that. 😊

The atoms, produced out of the energy of the Big Bang, would never be "nothing" as nothing doesn't seem to exist. There is the vacuum of space-time which gives the atoms freedom to move and produce all the swell effects we see.

[Quote from Cassius](#)

And in my view we have painful proof of why it's important to take a position

You're preaching to the choir. 😊 I think you need science backing up your philosophical positions.
