

Why Everything Turns More Complex

Post by “Joshua” of April 5, 2025 at 11:19 AM

That is a very interesting article, [Martin](#), thank you!

Quote

Kauffman argues that biological evolution is thus constantly creating not just new types of organisms but new possibilities for organisms, ones that not only did not exist at an earlier stage of evolution but could not possibly have existed. From the soup of single-celled organisms that constituted life on Earth 3 billion years ago, no elephant could have suddenly emerged — this required a whole host of preceding, contingent but specific innovations.
