

Book Note From Facebook Epicurean Group: "Quantum Bullshit - How To Ruin Your Life With Advice From Quantum Physics"

Post by "Cassius" of September 28, 2025 at 9:12 AM

I can't endorse or oppose this book, but this might be worth checking out from a post by Peter Forster at Facebook in the Epicurean group:

I'd like to recommend this book which debunks quantum mysticism. Although it's not related to Epicurean Philosophy I think the principle is the same atoms or quantum particles are not individual units of consciousness.

"A fun and engaging experience."

And Other Cosmic Questions

Quantum Bullshit

How to Ruin Your
Life with Advice from
Quantum Physics

Science is so f*cking rad. We don't deserve it.

What actually is quantum physics? If you can answer that question without bullsh*tting the person standing next to you in the bookstore, you can stop reading right now. But although most of us don't actually understand quantum physics, we know that it's mystical and awesome, and if we understood it, we'd probably be rich and beautiful and happy, right? After all, there are plenty of people out there trying to sell you quantum crystals to align your quantum energy with your quantum destiny. Can they all be wrong?

Spoiler: yes. Yes, they can. There is no such thing as quantum crystals. Sorry!

Luckily, as pseudoscience takes over the internet and it's getting harder and harder to separate alternative facts from real science, Chris Ferrie (an actual quantum physicist!) is here to explain quantum physics in a way that makes sense, so you can see the hucksters and bullsh*tters coming from a mile away—and school them in what quantum entanglement *actually* is (it has nothing to do with your romantic life). If you f*cking love science and want to be slightly less dumb than you were when you woke up this morning, *Quantum Bullsh*t* is the truly out-of-this-world book for you.

"Chris Ferrie goes after the quacks and grifters who peddle 'quantum' remedies with the withering scorn that they deserve. Honest readers will be entertained by the invective and in the process will learn a thing or two about the most successful theory in the history of science." —CHAD ORZEL, international bestselling author
