

# Discussion of New Article - In An AI World, The Epicurean View of Knowledge Is More Important Than Ever

Post by "Don" of May 16, 2026 at 12:01 PM

## [Quote from Cassius](#)

So as per our prior discussions I think you too agree Don that just like the sensations, the "prolepses" are never "opinions."

Agreed, but I believe Epicurus thought that the mind/soul could receive images/eidolon directly as a sense like taste, touch, etc. Reason then have meaning to those perceived images. That's why, according to Epicurus, we can have a prolepsis of justice and other immaterial or abstract concepts.

In the midst of these conversations, I feel the need to state for myself: modern neurobiology and psychology would appear to show the human brain doesn't work like the ancient Greeks thought. Understanding how Epicurus vs Stoics vs Sceptics thought sensation, reason, prolepsis, katalepsis, etc worked is enlightening in light of their positions, but I feel no need to accept any specific detail that doesn't hold up to modern scrutiny to consider myself an Epicurean.
