

# Technology Question - How Best To Create "Video" With Speech Matched To Scrolling Text

**Post by "Cassius" of October 11, 2019 at 1:20 PM**

What kind of text-to-speech engine are you using? I am familiar that Android has something but is your engine something that is native to Windows or Mac or Linux or Python or what?

In the end I am thinking that human voices will be the main use of this, but as text-to-speech improves (IF it improves) then that will be viable too. I say "if" because my experience was that the Ivona packages were leading the field before they were bought (by Amazon I think) and effectively removed from the market.
