[Quote from Elayne](#)

taking the Heisenberg principle that the act of measuring phenomena at the subatomic scale influences the experimental results, so that we can measure position of the particle OR the velocity but not both at the same time, to thinking that means we can basically bend spoons with our minds

Or taking it to mean that everything is so chaotic that NOTHING can be predicted or counted on, so hey, what the heck, let's just give up trying and get drugged out!
