

The Nature of the Universe - Not Random, But Undirected?

Post by "Martin" of December 3, 2019 at 10:39 AM

I see no point in a generalization like that. We need to go into specifics when applying these adjectives.

E.g., in the described behaviour of animals, "undirected" is distinct from "random".

In popular publications on non-linear physics for laymen, too, "chaotic" has the meaning of "undirected" as above.

When our pleasure depends on a whimsical king, "subject to fortune" sounds adequate.
