

# Infinity and the Expanding Universe

Post by “Godfrey” of July 25, 2020 at 7:13 PM

[Don](#) I've just watched the Economist video and the Brian Greene video and find them quite thought provoking. However what I'm finding is that, for me, physics videos are basically appetizers: just enough to get some idea of the issues but not a full understanding. For me, doing some reading will provide the chance to follow the arguments more carefully as well as to reflect on the implications. But if this subject was simple, we wouldn't be discussing it!

More specifically, the string theory as presented by Greene seems profoundly unsatisfying: too many machinations for too few results. Of course there is the factor of my admitted ignorance.... 🙄 But I tend to prefer the Ockham's razor approach; the approach in the video seems way too convoluted to suit my simplistic taste.

Thanks for the links though!
