

Episode Thirty - Only A Limited Number of Combinations of Atoms Is Possible

Post by "Cassius" of August 8, 2020 at 6:36 AM

Thanks for commenting on this because yes I think this was a very interesting discussion and something that needs to be articulated better. I'm not sure we really understand the Polyaenus example either. I know Frances Wright treats it at some length, and now her commentary has replaced in my mind what may be in the ancient texts from which we are working.

Don do you agree that that the Polyaenus illustration is pretty much exactly on point? When I get back to the computer later today I will try to gather the actual references. I think we can trace them through footnotes in DeWitt if nowhere else.
