

How Would Epicurus Account For Depression? - Main Thread

Post by "Cassius" of March 11, 2017 at 6:34 PM

[Jimmy Daltrey](#) [February 22 at 10:58am](#) How would Epicurus account for depression?

AR A disturbed soul (nervous system). A confused soul. A corrupted (miseducated) soul. Nature made. See the letter to Menoeceus. See OTNOT on how Nature makes monsters. See how all men cannot be brought to wisdom.

[Like](#) · [Reply](#) · [4](#) · [February 22 at 2:04pm](#) · [Edited](#)

[Jimmy Daltrey](#) I read the letter, is he saying the depressed should simply kill themselves?

[Like](#) · [Reply](#) · [February 22 at 11:17am](#)

[Hiram Crespo](#) Image not found or type unknown

Hiram Crespo The 25 th book On Nature deals w moral development and discusses neuroplasticity, including E's view that we should change the structure of our brains. So I think E would encourage practices along those lines that have been shown to change brain structure.

[Unlike](#) · [Reply](#) · [4](#) · [February 22 at 11:23am](#)

AR Epicurus is not making a blanket recommendation to suicide. Read Menoeceus again. Only life provides the opportunity for happiness. Death is the end of sensation. All good comes through sensation, and recollection of their presentations.

[Jimmy Daltrey](#) Image not found or type unknown

Jimmy Daltrey Thanks, I'll look at the book. I think what I am getting at, is whether there is a therapeutic practice (beyond medication) that would enable a person to understand how they could, should, address their problem?

[Like](#) · [Reply](#) · [February 22 at 11:32am](#) · [Edited](#)

[Jason Baker](#) Image not found or type unknown

Jason Baker It's hard to imagine a practicing Epicurean having the company of fellow Epicureans, living according to nature, ever becoming depressed. Exercise, conviviality, cooperation, autarky... these things don't leave much room for malaise.

Clinical depression is another thing entirely. Pharmacological intervention would likely be necessary before Epicurean philosophy would be of any benefit.

[Unlike](#) · [Reply](#) · [2](#) · [February 22 at 11:34am](#)

Jimmy Daltrey

[Jimmy Daltrey](#) [Jason Baker](#): interesting, however how many Epicureans live in Epicurean communities? I get the point though, it would make for amazing therapy.

[Like](#) · [Reply](#) · [1](#) · [February 22 at 11:37am](#)

Hiram Crespo

[Hiram Crespo](#) That is true. There are cases that require medical attention. But neuroplasticity shows that long term change is possible so we have to continue supporting the study of nature - scientific research in this regard.

[Elli Pensa](#) Image not found or type unknown

[Elli Pensa](#) [Jimmy Daltrey](#) who was that philosopher that killed himself ...Epicurus ??? NO ! Zeno died around 264 BC. Laertius reports about his death: "As he left the school, he tripped, fell and broke a toe. Hitting the ground with his hand, he cited words of Niobe: "I am coming, why do you call me thus?" Since the Stoic sage was expected to always do what was appropriate (kathekon) and Zeno was very old at the time, he felt it appropriate to die and consequently strangled himself.

[Unlike](#) · [Reply](#) · [2](#) · [February 22 at 11:59am](#)

Elli Pensa

[Elli Pensa](#) - Epicurus : And so he who advises a young man to live well, and an old

man to die well, is a simpleton, not only because life is desirable for both the young and the old, but also because the wisdom to live well is the same as the wisdom to die well. (letter to Menoecus)

Jason Baker **Jimmy Daltrey**, translations and secondary sources have their bugbears. Several members here have collected multiple translations together for study on their web pages outside of FB and published their reasonings on most topics of interest. We're working to make that more accessible to the masses, but in the meantime questions are best framed after studying the material. The premises of many questions dissolve away entirely after doing so.

Elli Pensa

Elli Pensa Against the depression Epicurus said in greek : «παρεγγυῶν τὸ συνεχὲς ἐνέργημα ἐν φυσιολογίᾳ καὶ τοιοῦτῳ μάλιστα ἐγγαληνίζων τῷ βίῳ» that means "I recommend constant activity in the study of Nature and this way more than any other I bring calm to my life". For this purpose, he introduced Κανονικὸν (Canonikon), an empirical methodology of inquiry consisting of observation by the senses and drawing inferences for the unknown based on analogies with the observed. This approach made Epicurean philosophy very comprehensive and among all ancient philosophies by far the most compatible with modern scientific findings. Modern scientific findings means the science of medicine that has a field that is called "Endocrinology" that diagnoses and treats diseases of the endocrine organs or

dysregulation of hormones homeostasis.

The major hormones that create happy feelings are (many of the ones below also act as neurotransmitters):

- **ACETYLCHOLINE:** Alertness, memory, sexual performance, appetite control, release of growth hormone.
- **DOPAMINE:** Feelings of bliss and pleasure, euphoric, appetite control, controlled motor movements, feel focused.
- **ENDORPHINS:** Mood elevating, enhancing, euphoric. The more present, the happier you are! Natural pain killers.
- **ENKEPHALINS:** Restrict transmission of pain, reduce craving, reduce depression.
- **GABA (Gamma Amino Butyric Acid):** Found throughout central nervous system, anti-stress, anti-anxiety, anti-panic, anti-pain; Feel calm, maintain control, focus.
- **MELATONIN:** “Rest and recuperation” and “anti-aging” hormone. Regulates body clock.
- **NOREPINEPHRINE:** Excitatory, feel happy, alert, motivated. Anti-depressant, appetite control, energy, sexual arousal.
- **OXYTOCIN:** Stimulated by Dopamine. Promotes sexual arousal, feelings of emotional attachment, desire to cuddle.
- **PHENYLETHYLAMINE (PEA):** Feelings of bliss, involved in feelings of infatuation (high levels found in chocolate).
- **SEROTONIN:** Promotes and improves sleep, improves self esteem, relieves depression, diminishes craving, prevents agitated depression and worrying.

Haze Elle Profile not found or type unknown

Haze Elle As someone who has been depressed (and contemplated suicide for the better part of a year), but isn't now, I think that there are a few things we can glean from Epicurus. 1. removal of painful stimuli. in my case, my depression was highly linked to a class and teacher that made me feel stupid and worthless. removing these helped a lot. 2. knowledge that sensations of pain end. Depression can feel all consuming, and knowing that it will end helps with they. Otherwise I echo that Epicurus would likely recommend treatment based on an investigation of the bodily and social causes of depression.

[Unlike](#) · [Reply](#) · [5](#) · [February 22 at 2:34pm](#)

Christopher Connolly Profile not found or type unknown

Christopher Connolly Depression is much more complex than some folks on here seem to believe. When you are in the grip of suicidal depression you probably wouldn't give a stuff what Epicurus or anyone other philosopher thought about it. It might be all your mind can cope with to to climb off the sofa and turn the TV off.

It can be a reaction to some sad or worrying event or it can come on for no apparent reason at all. I should think that a lifestyle which eschews hedonism in favour of

more simple pleasure and is non-religious is a good defence against becoming depressed, but when it's already happened then the best treatment might be the things that [Mish](#) mentioned, or it might be medication, or it might be a combination of all of them plus the kindness of friends.

[Like](#) · [Reply](#) · [1](#) · [February 22 at 3:48pm](#)

Jason Baker

[Jason Baker](#) I'm not entirely certain who in this discussion group believes depression is simple, the post may have been deleted or edited, can you point to a specific post that supports that premise? An important part of Epicurean inquiry into nature is the multiplicity of explanations for phenomena not fully explored. I don't know of any Epicurean that would claim cognition is an area of science fully explored.

[Unlike](#) · [Reply](#) · [1](#) · [February 22 at 4:37pm](#)

Elli Pensa

[Elli Pensa](#) There is no need of any scientific result how beneficial would be to stop watching that stupid box that is called TV. Here in Greece they are spreading terror through many programmes from the morning till the late hours of the night. To not mention all the stupid stuff for horoscopes and the celebrities. To not mention movies of horror. And all these things to make you to feel stupid, ignorant and depressed.

[Unlike](#) · **[Reply](#)** · **[2](#)** · **[February 22 at 4:18pm](#)**

Christopher Connolly

[Christopher Connolly](#) My experience from my last period of depression is that I lay on the sofa and watched snooker on the TV. I wasn't previously interested in snooker and I'm not really a fan now either, but at the time it was a nice, easy diversion and I found myself looking forward to it every day.

I honestly think that getting into the snooker championship, and starting to take an interest in it (although I can't remember who won) helped to kickstart my recovery.

So although I agree with Eli about celebs, horror and celebrities the TV can be therapeutic. It depends what's on!

[Like](#) · **[Reply](#)** · **[3](#)** · **[February 22 at 4:44pm](#)**

Jason Baker

[Jason Baker](#) **[Jimmy Daltrey](#)**, reread what Elli wrote. Perhaps there's another way of reading it that jives with your understanding? It would be better to ask **[Elli Pensa](#)** if she is talking about a clinically depressed person before assuming.

Watching television, especially alone, fulfills an unnecessary desire. Turning it off when it imbalances the hedonic scales is something a practicing Epicurean would do. A clinically depressed person isn't likely able to perform the calculus, intervention of some sort is required in that case. Epicurean philosophy places a lot of weight on friendship as a mechanism for healthy living. This is definitely a circumstance where

the support of a friend is warranted.

Christopher Connolly, thanks for sharing that personal experience. It just goes to show that the hedonic calculus is a very personal thing and is going to be different for different people, times and places. The methodology of performing that calculus is going to be the same but the results will vary given different circumstances. I'm glad you were able to find a way out on your own!
