

Largest Spinning Object in the Known Universe

Post by “Kalosyni” of December 8, 2025 at 7:18 PM

This is facinating:

Image not found or type unknown

[Giant rotating string of galaxies is 'probably the largest spinning object' in the known universe](#)

A giant rotating filament of the cosmic web may be the largest spinning structure ever seen, and could help reveal how galaxies form.

Also [this Reuters article](#).

[Cassius](#) do we have a place for these science type articles?

Post by “Cassius” of December 8, 2025 at 8:07 PM

Definitely part of the Physics forum and I would probably put it under the Infinite / eternal universe section. I will move it to a better place now. Move it further if you see a better place later.

Also: I like that the title includes the word "Known" in it.
