Admin note: The biggest frustration I have with our forum software is that we don't have the site set up to give prominence to "articles" such as this new one by Elli. The current "blog" and "articles" section do not appear to be well integrated with the "Forum" software. Those of us who rely on the "red dot" notifications to point us to new content are not being directed to new blog and article entries or to the comments being made on them. The situation appears to be somewhat better with "Gallery" postings, but that's not ideal either.

It therefore seems that these new postings are frequently being missed, and we need to do better.

Right now the best way to be sure you see all new content here at the stite is probably to bookmark the "[Recent Activity](#)" page, and scan through the latest entries there when you come to the forum to check for new "red dot" notifications.

We're working on a solution to this and hope to have that rolled out soon!

[Elli](#)publish here! Facebook won't let me read it without re-enlisting. 😊

I am happy to see that map Elli included! I made it many years ago and have it on my wall... but I did not expect to see it in the wild! I forgot I had even shared it.
